Hotel Monitoring

"Rooms Status" identifies rooms with heating and air-conditioning issues.

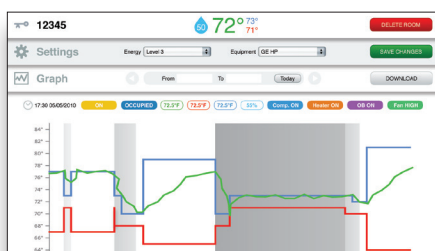

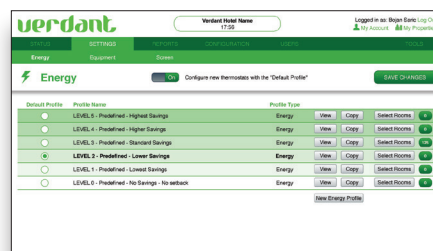

"Room Occupancy" makes it easy to schedule hotel staff visits to rooms without having to disturb guests.

"Room Efficiency" calculates energy efficiency of each room.

Remote Configuration

Energy Profiles allow changing thermostat settings in order to fine tune energy saving and comfort control options.

Equipment Profiles configure thermostats to operate different kinds of heating and air-conditioning equipment.

Room Monitoring

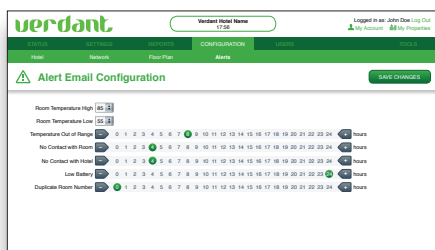

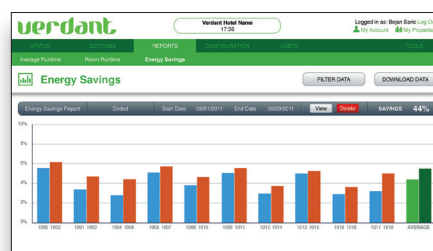

"Room Detail" view displays temperature and occupancy changes in each room.

Settings menu allow quickly and easily changing thermostat settings.

Advanced Reporting

Runtime reports monitor heating and air-conditioning runtimes in all rooms.

Patented "Energy Saving Report" measures energy savings resulting from use of Verdant energy management features.

Automatic Email Alerts

Built-in diagnostic tools automatically send email notifications when operational issues are detected.

Fully configurable alert settings allow customizing when to send email alert.

User Management

User Management makes it easy to configure different access permissions and alert notification for each user.

Access Permissions allow giving users access to remote management website without having to worry about unauthorized changes.

Alert Preferences allow choosing recipients of email alerts to ensure timely response to operational issues.
